

## Assignment 5.2 Consolidated\_Debasish Panda

R:

```
# Course:DSC640
# Name:Debasish Panda
# Exercise 5.2

# Set Directory path
setwd("C:/Users/debas/OneDrive/Desktop/Bellevue/DSC 640/Week_9_10/ex5-2")

# Import required packages
library('magrittr')
library('ggmap')
library('ggplot2')
library('usmap')

#read the data sets
ppg <- read.csv('ppg2008.csv')
costco <- read.csv('costcos-geocoded.csv')

# Create a statewide count of Costco
costco_sum <- costco %>%
  dplyr::mutate(state = State) %>%
  dplyr::group_by(state) %>%
  dplyr::summarise(store_count = dplyr::n())

### Plot1: Heat Map
heatmap(as.matrix(ppg[,2:ncol(ppg)]))

### Plot2: Spatial Chart
# plot number of Costco stores in staes through color intensity
options(repr.plot.width = 4, repr.plot.height = 3)
plot_usmap(data = costco_sum, values = "store_count", lines = "white") +
  scale_fill_continuous(name = "Number of Costco Stores (2015)", label =
scales::comma) +
  theme(legend.position = "right")

### Plot3: Contour Plot
ggplot(ppg, aes(x=FTM, y=FTA))+
  theme_bw()+
  geom_point(alpha=0.1, col='red')+
  geom_density2d(color='black')+
  ggtitle('Contour Plot')+
  theme(plot.title = element_text(hjust = 0.5))+
  labs(x='FTM', y='FTA')
```

Spatial Chart:

Contour Plot:

## Python:

You need to submit 3 heat maps, 3 spatial charts and 3 contour charts using Tableau or PowerBI, Python and R using the data below (or your own datasets). You can also use D3. You can choose which library to use in Python or R, documentation is provided to help you decide and as you start to play around in the libraries, you will decide which you prefer.

```
In [14]: # Import Libraries
import pandas as pd
import matplotlib.pyplot as plt
import matplotlib as mpl
import numpy as np
import chart_studio.plotly as py
import cufflinks as cf
import seaborn as sns
import plotly.offline as plo
```

## Data read

```
In [10]: # Read world population data
costco = pd.read_csv('costcos-geocoded.csv')
ppg = pd.read_csv('ppg2008.csv')

# summarize statewide Costco store count

costco_sum = pd.Series.to_frame(costco.groupby('State')['Address'].count())
costco_sum = costco_sum.rename({'Address': 'store_count'}, axis=1, inplace=False)
costco_sum = pd.DataFrame(costco_sum.to_records())
```

## Heat map

```
In [11]: sns.heatmap(ppg.iloc[:,1:])
```

Out[11]: <AxesSubplot:>

## Spatial Plot

```
In [12]: # plot the costco store count across US states

data=[dict(type='choropleth', autocolorscale = False,
           locations=costco_sum['State'], z=costco_sum['store_count'],
           locationmode='USA-states', colorscale='YlOrRd',
           colorbar=dict(title='Store Count'))]

layout = dict(title='Costco Store Count',
              geo=dict(scope='usa', projection=dict(type='albers usa'),
                       showlakes=True, lakecolor='rgb(66,165,245)'))

fig=dict(data=data, layout=layout)

plo.plot(fig)
```

Out[12]: 'temp-plot.html'

## Countour plot

```
In [13]: %matplotlib inline

# define function

def f(x, y):
    """
    Args:
        two numpy arrays (x, y)
    Returns:
        square root of sum of square of x and y
    """
    return np.sqrt(x**2 + y**2)

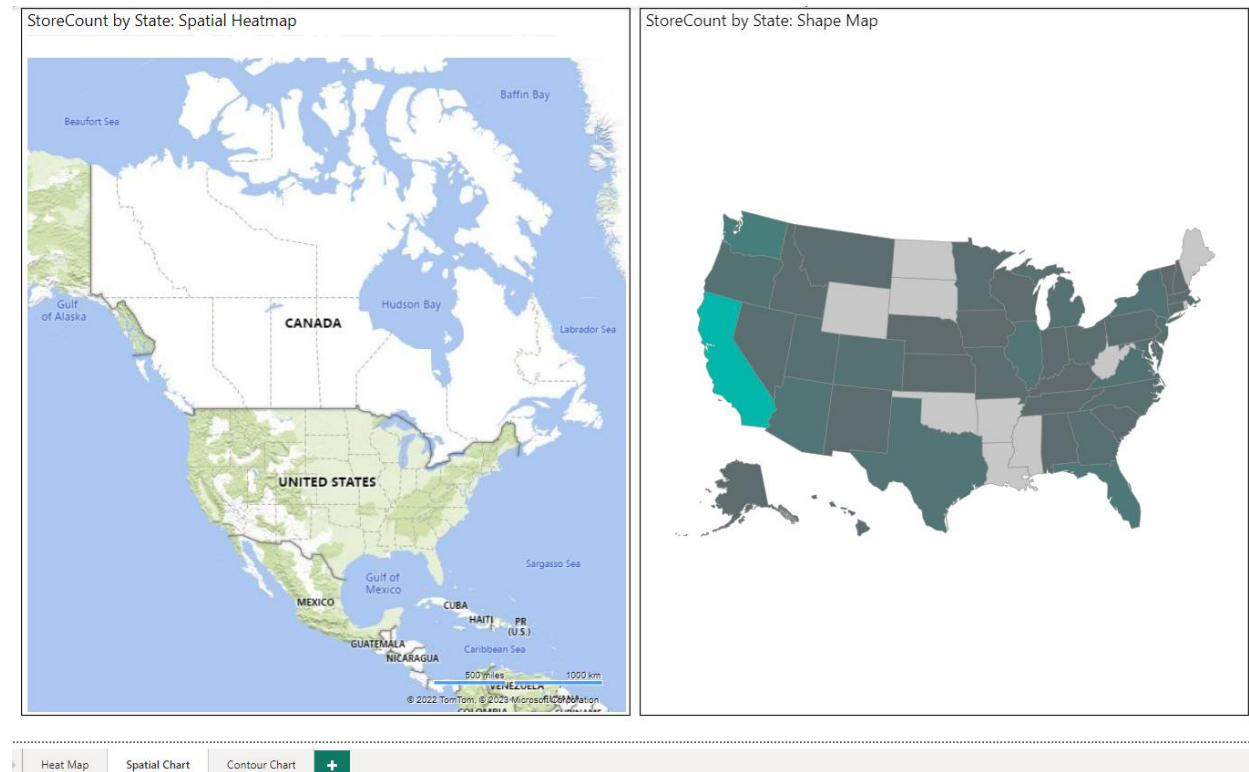

x = np.array(ppg['FTM'])
y = np.array(ppg['FTA'])

X, Y = np.meshgrid(x, y)
Z = f(X, Y)

plt.figure()
cp = plt.contour(X, Y, Z)
plt.clabel(cp, inline=True,
           fontsize=10)
plt.title('Contour Plot')
plt.xlabel('FTM')
plt.ylabel('FTA')
plt.show()
```

## Spatial Chart:

## Contour Plot:
